Q max (see table of performances)

PRESSURE DROPS ΔP -Q

OPERATING PRINCIPLE

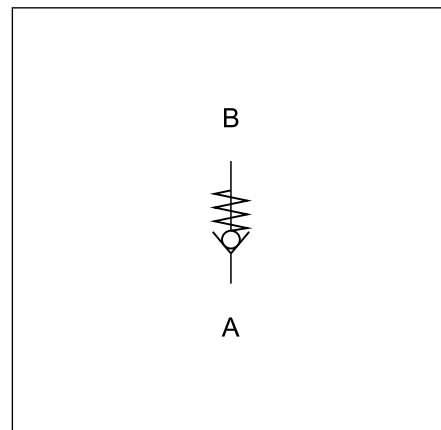

- VR*-I valves are one-way check valves with spring, cartridge type, that can be used in blocks or panels.
- In rest conditions, the valve poppet, which is a cone on edge seal type, is kept closed by a spring with fixed setting.
- The poppet opens when the pressure at the inlet port "A" exceeds the set value of the spring, additional to any pressure in the outlet port "B".
- Available in three sizes for flow rates of up to 300 l/min. Three cracking pressures values available.
- The zinc-nickel finishing treatment makes the VR*-I suitable to withstand exposure to salt spray for 600 hours. (value established according to UNI EN ISO 9227 and UNI EN ISO 10289)

2 - HYDRAULIC FLUIDS

Use mineral oil-based hydraulic fluids HL or HM type, according to ISO 6743-4. For these fluids, use NBR seals. For fluids HFDR type (phosphate esters) use FPM seals (code V). For the use of other kinds of fluid such as HFA, HFB, HFC, please consult our technical department. Using fluids at temperatures higher than 80 °C causes a faster degradation of the fluid and of the seals characteristics.

The fluid must be preserved in its physical and chemical characteristics.

3 - OVERALL AND MOUNTING DIMENSIONS

NOTE: the dimension **A1** must be at least 1 mm higher than the dimension **A** indicated in the table here below.
